5. The system can monitor all events and current queue status.					
--	--	--	--	--	--

C. Compatibility

Indicators	5	4	3	2	1
1. The system can exchange and utilize data across platforms.					
2. The system is compatible with different versions of Android devices.					
3. The system works properly on various browsers for web access.					
4. The system integrates smoothly with existing devices such as desktop computers and mobile phones.					
5. The system can operate on different screen sizes without functionality issues.					

D. Usability

Indicators	5	4	3	2	1
1. The system can easily understand by the user.					
2. The system is less time consuming.					
3. The user operates the system easily without giving too much effort.					
4. The design of the user interface is good to the eyes and can easily attract the user.					
5. In terms of controlling the system, it is responsive.					

E. Reliability

Indicators	5	4	3	2	1
1. The system can detect any loss of connection immediately.					
2. The system is operational and accessible after a loss of connection.					
3. The system operates as intended despite the presence of hardware or software results.					
4. In case of problems, the system can recover all established data using different reports.					
5. In case of interruption or a failure, the system can recover all established data on the current state of the system.					

F. Security

Indicators	5	4	3	2	1
1. The system secures all user and transaction data.					
2. The system can be only access by the respective authorized person.

3. The system prevents any modifications or unauthorized access.					
4. The system can trace the different actions done by the user.					
5. The system ensures the confidentiality and privacy of student information.					

G. Maintainability

Indicators	5	4	3	2	1
1. The system can be updated or modified without affecting its performance.					
2. The system is maintainable.					
3. The system provides a stable interface.					
4. The system can be efficiently tested to meet the criteria.					
5. The system can identify the parts needed to modify.					

H. Portability

Indicators	5	4	3	2	1
1. The system can run effectively on different hardware or operating systems.					
2. The system can withstand technology changes.					
3. The system can be successfully run in any given environment.					
4. The system supports adding new features or modules without causing errors.					
5. The hardware sensors can be replaced when broken.
